[Certification Data](#)

[Certification Architect](#)

MBA, Tech Lead, Technical project manager, backend developer/Lead data engineer with 16+ years in the IT area with different languages like Java, Python, .net. Developed skills in Analysis and Development of Applications for Desktop and Web, business intelligence, big data, Machine learning enthusiast with knowledge in the financial services industry, airlines, consulting, retail, government, telecommunications, business process, Agile and Rup Methodologies. Interested in new technologies and techniques of Management applies to IT.

EXPERIENCE

INDEPENDENT, El Salvador – Consultant/Data Engineer (May 2017 – Present)

- Consultancy on software implementation through defining Business requirements, custom software development, programming of components in different languages, business plans definition using python, AWS, GCP, Java, goLang, .net, Sql Server, MySQL, Oracle
- Defined the architecture in AWS for business requirements of processing of data, the pipelines and deploy of docker images using services: S3, lambda, redshift, kinesis, Dynamo, Glacier, Glue, Quicksight
- Designed, built and supported scalable, highly available data pipelines
- Led efforts to assess and mitigate risks related to data management, including data breaches, data loss, and data misuse.
- Provided guidance and support on data-related initiatives, including data governance, data architecture, and data lifecycle management.
- Stay abreast of emerging trends and technologies in DataOps and Data Governance, evaluating their potential impact on the organization's data strategy.
- Worked with cloud platforms (AWS, Azure, or GCP) to integrate Databricks with storage, compute, and networking services handling large datasets efficiently, ensuring low-latency and high-throughput data processing.
- Provided in-depth SQL expertise across databases like MySQL, PostgreSQL, Oracle, and SQL Server, etc. This included database design, optimization, complex querying, data migration, and ETL processes.
- Set up Pub/Sub topics for real-time data ingestion
- Designed and implemented data pipelines using Google Cloud Dataflow /Databricks to process and transform large datasets.
- Transformed and loaded data into BigQuery ensuring optimal performance and scalability and implementing efficient BigQuery schemas based on data access patterns.
- Managed batch and streaming data loads into BigQuery from diverse data sources.
- Developed SQL queries to perform data validation and ensure data integrity in BigQuery.
- Presented reports and findings with Quicksight/ Tableau to take strategic decisions to C Level by processing of the data with Pyspark, Hadoop, hive creating machine learning models from different sources in order to propose recommendations to the business

Tools: Microsoft Project, docker, .net, Sql Server, dbt, databricks, python, kafka, pyspark, flask, hadoop, looker, airflow, snowflake, hive, java, MySQL, Mongo, Oracle, looker, Power BI, Dynamo, AWS, GCP, PostgreSQL, GitHub, Tableau

SIMAN, El Salvador - Technical Lead (March 2020 – Current) Lead retail company in all Central America.

- Led the implementation of the new pos system using java, Unix, oracle, by upgrading the system to the version, through this the company will increase their sales channels and sales by 50%.
- Designed and implemented TCP/IP-based server/client systems from scratch. Developed multi-threaded servers capable of handling thousands of concurrent client connections in an asynchronous, clustered environment.
- Provided guidance to the qa team teaching how to test the changes and valid the outcomes in the different scenarios
- Defined requirements in conjunction with the business to take in considerations the business goals and avoid delays
- Assisted in mapping a technology process to meet business needs, evaluating, and refining that process, and serving as a liaison between the department and business, supporting escalated production issues, evaluating, and performing root cause analysis to determine the best resolution.

- Built high-performance caching systems and for synchronizing tasks in parallel processing pipelines. These implementations ensured thread safety and improved the performance and reliability of critical systems.
- Communicate with the providers to assure the best quality in the project through detecting fails, define new requirements by leading negotiations with the different providers
- Guaranteed the best standards and clean implementation for the software by reducing the risks associated with the project and reviewing the code in java to the developers in order to ensure the quality of the deliveries.
- Tools: Microsoft Project, Java, oracle, and Unix

GBM, El Salvador – Lead data engineer (Jan 2018 – Dec 2019)

Leading provider for IT solutions and support in Central America, is partner of IBM

- Led the implementation of business intelligence projects using Sql Server, Cognos for different customers of the company, through managing business intelligence developers, making technical proposals to the stakeholders, definition of work plans, accompaniment during the implementation process to guarantee the fulfillment of the projects using the last technologies of IBM with contracts of more than \$5 millions of dollars with improvements of 50% in the client processes
- Defined dashboard and reports using Cognos for Director to take decisions about the roadmap of the taxes ministry of El Salvador through the creation of ETL process, data models. Communicate to the stakeholders on the client and internal side of the company the possible conflicts in the development of the project
- Provided the definition of architecture for the implementation of the new version: servers, resources, etc.; by defining the different resources needed to build the cube, adopting and applying appropriate technical and quality strategies and standards achieving saving cost at 35%
- Reviewed and analyzed existing ETL processes as well as external sources in order to make the necessary modifications and define the best architecture to the implementation
- Developed, implemented, and maintained ETL processes, transforming provided data using appropriate manipulation techniques, and loading it into the Star schema
- Implemented data validation and data quality checks during the ETL process to ensure accuracy, consistency and completeness of the data. Identified and resolved data quality issues in collaboration with the data analysts and strategic operations teams
- Document ETL processes, data mappings, and transformations to ensure knowledge sharing
- Developed and maintained data catalogs and metadata repositories to facilitate data discovery, lineage, and impact analysis.
- Provided guidance and support on data-related initiatives, including data governance, data architecture, and data lifecycle management (Dataops, Data governance).
- Analyzed and organized data raw to cleaning and incorporate in the workflow across the company
- Created charts, kpi, metrics optimizing the performance to complete business goals defined for the Directors

Tools: Microsoft Project, Trello, Sql server, Cognos, Integration services, Power bi

TIGO, El Salvador - Software Architect (Oct 2017 – Dec 2017)

Tigo is a brand of Millicom a multinational Telecom company, leading provider of cable, mobile, and high-speed broadband

- Defined Business requests and the architecture for the department of AML (Money laundering) and TIGO MONEY (application for sending consignments) using Java, Oracle, Postman by defining interfaces for tigo money with SOA approach, and mapping of actual systems.
- Played a pivotal role in developing core Java applications, focusing on high concurrency and performance. Leveraged Java's Concurrent Package to build systems capable of handling multiple client requests in real-time.
- Designed and implemented TCP/IP socket-based communication systems for various internal applications, ensuring efficient and reliable data exchange across the network.
- Led initiatives in database design, optimization, and migration, particularly within SQL Server and Oracle environments, supporting Tigo's large-scale operations.
- Tracking of the project progress with the different areas: Commercial, Mediation, Datawarehouse, etc; through determining work guidelines with the different software providers. Design of business case, sequence diagram and components.

Tools: Microsoft Project, Java, Postman, Oracle

AVIANCA, El Salvador – Lead data engineer (Feb 2014 – Dec 2016)

Latin American Airlines

- Led the implementation of the new business intelligence suite for 7 countries in Avianca Airlines by building the Datawarehouse solution using Sql server, oracle, informatica, Obiee, dac, Oracle through coordinating, developing Etl process, data models, implementing new projects of business intelligence. Keep working the Datawarehouse, quality of the information, guiding business intelligence developers to assure the quality of the deliveries
- Develop improves and give expert support of the systems assigned by preparing presentations to C Level about new features, new findings, and new projects, building and sustaining effective communications with other roles involved in the project, documenting applying the best practices
- Developed of reports and a dashboards requested for the client improving the strategic decisions for the C level by Extracting, transforming, loading the data of metrics, defining the workflow of execution of the Etl.
- Created Procedures in PL/SQL to extract information and optimize workflows to accomplish the different kpis
- Oversee the implementation of data governance frameworks and policies to ensure compliance with regulatory requirements and industry best practices.
- Defined and enforced data governance roles and responsibilities, including data stewardship and ownership, to ensure accountability and transparency in data management practices.
- Performed data profiling and data migration using Informatica ensuring data accuracy, completeness, and timeliness
- Identified, analyzed, translated business requirements into conceptual, logical and physical data models in complex environment, collaborating with projects teams to understand business requirements, data sources and integrations needs • Optimized ETL performance by identifying and addressing bottlenecks and tuning ETL processes

Tools: Microsoft Project, informatica, Obiee, dac, Rpd, Oracle, Tableau

SIMAN, El Salvador - Business Consultant (March 2013 – June 2013) Lead retail

company in all Central America.

- Implemented oracle EBS for 8 countries in Siman through Business and technician Analysis using Java and Oracle defining requirements Analysis for the migration of the actual system (RI) to the new system Oracle Retail
- Analysis of the actual process and the new one that will implement by participating in meetings with business and the foreign technical team for define scopes and take decisions, negotiating with manager of business, manager of development, software architects, integration architects, Quality auditors, and developers the changes to include in the definition of the requirements. Tools: Microsoft Project, Oracle, Java

G&T Continental Bank, El Salvador - Analyst Programmer (June 2010 – Dec 2011)

Leading bank in Guatemala

- Migrated the core system for 6 branch office in Bank G&T El Salvador by Analyzing, designing and developing the loan system improving the processes in a 50%
- Led the development of core banking modules using Java, with a strong emphasis on concurrent programming. Implemented ExecutorService to manage multiple concurrent client requests, improving system efficiency and reliability.
- Designed TCP/IP-based client/server applications, handling communication across different branches of the bank.
- Worked with SQL Server and Oracle databases, optimizing queries and ensuring the integrity and performance of the bank's critical systems.
- Developed and supported of Web systems and loan modules using Java, JsF, C++, Sql server, Oracle, asp.net Tools: Microsoft Project, C++, asp.net, java, jsp, jsf, sql server, and oracle

CITIBANK, Nicaragua - Development Engineer (July 2008 – May 2010)

U.S. bank with agencies in all the world

- Migrated the core system for 16 branch office in Citibank Nicaragua using visual basic, java, Sql Server, and Sybase, ClearCase and clearquest by Analysis, design and Development the saving and deposit systems improving the processes by 60%
- Developed multi-threaded, concurrent applications. Used ExecutorService and ConcurrentHashMap for managing high-concurrency tasks and caching in the banking environment.

- Implemented the systems Saving Accounts, Checking Accounts, Certificate of Deposit through Generating Reports, executing batch process, Reviewing with business people about the requirements and bank policies Development of quality test under the methodology Rup.

Tools: Visual basic, java, sql server, and Sybase, ClearCase, ClearQuest

SKILLS

Project Management: Advanced: PMI, Scrum, Design Thinking; Advanced: Requirements Analysis, Business Process

Programming Languages: Python, Pl/Sql, Visual basic .net, Javascript, Visual basic 6, C++, Asp.net; Java

Database: SQL: MySQL, SQLite, PostgreSQL, SQLServer, Oracle, Sybase. NOSQL: DynamoDB, Mongo Cloud

Computing: AWS, Azure, GCP

Frameworks and Tools: Pandas, Numpy, ScikitLearn, Pyspark, React, Flask, Toad, NetBeans, JDeveloper, Project, Visual studio, Sqr, Jsp, Jsf, Tomcat, Glassfish, IIS, Github, J2EE, Spring, informatica, Powerbi, Looker, Tableau, Obiee, Dac, Cognos

Languages: English, Fluent; Spanish, Native;

EDUCATION

Professional Cloud Architect, Google (2025)

Associate Data Practitioner, Google (2024)

Master of Business Administration (MBA). Pontificia Catolica de Chile University, Chile. (2017).

Student of Master in Management, Design and Direction of Projects. Miguel de Cervantes. University, Spain. (2022 Expected).

Nanodegree Cloud developer with azure and Python, Udacity (2021-Present)

[**Machine learning with python bootcamp**](#), dphi (2020)

Student of Machine Learning , Stanford University (Current) **Student of Data Science,** Harvard University (Current)

Python for Data Science and Machine Learning Bootcamp, Udemy (Current)

Course of Negotiation . Pontificia Catolica de Chile University, Chile. (2016) **Big Data**

101 , Big Data University (2016).

Introduction to R, Intermediate R, Importing data into R, Data manipulation in R , DataCamp (2016).

SCRUM, Don Bosco University, (2014).

ITIL V3 , NETEC, (2014).

Java Course, ITCA (2010).

Visual Basic. Net Course, ITCA (2009).

Bachelor Degree in Computer Science, Dr. Jose Matias Delgado (2006).
