

DINROY MANUEL FOCO SANAVIA

DESARROLLADOR DE SOFTWARE SENIOR FULLSTACK

Arequipa Peru | +51 963075518 | mfoco84@hotmail.com | <https://www.linkedin.com/in/mfoco84>

Full Stack Software Engineer with 15 years of experience, specializing in modern architecture standards and enduring design patterns. Proficient in both backend and frontend development, leveraging cutting-edge technologies and expert-level AWS cloud mastery.

WORK EXPERIENCE

SEP 2023 -
PRESENT

SENIOR SOFTWARE DEVELOPER AT QUALITY AND DEVELOPMENT SOFTWARE

In this position I'm a backend developer. One of my best contributions was to develop micro services and the Infrastructure as Code in AWS resources (Lambdas, Queues, API Gateway, etc.). These services must send information to the front-end applications and third party software.

Responsibilities:

- Develop the Infrastructure as Code using Pulumi for the AWS Cloud. This way I create Lambdas, Queues, API Gateway, etc.
- Develop microservices to send data from data sources (databases, data lakes and another microservices) to front end applications and third-party software. Attend meetings with the client to confirm a correct interoperability.
- Develop SQL queries, stored procedures, improve database performance using tools like AWS, Dbeaver and SQL Server Management studio.
- Develop test cases to guarantee high quality code.
- Participate in Scrum meetings such as dailies, sprint planning, reviews, and retrospectives.

Tech Stack:

- The cloud of AWS: Redshift, Glue, Lambda, RDS, S3, EC2, API Gateway.
- Tools: Pulumi for IAC.
- Backend: NodeJS, ASP .Net Core.
- Languages: C#, Typescript, Javascript
- Devops: Jenkins, GIT
- Databases: SQL Server, PostgreSQL, MySQL, DynamoDB

DEC 2021-
AUG 2023

SENIOR SOFTWARE DEVELOPER AT BANTOTAL

One of my best contributions in this company was to embed the first versions of the banking software, only compatibles with Internet Explorer, to modern environments: WPF for Desktop and browsers based in Chromium for web.

Responsibilities:

- Develop a server to catch every web file and transpile it to modern code to execute web pages in modern browsers like Chrome, Edge, etc.
- Transpile old ECMA Script to modern ES to avoid errors for example using attachEvent (Internet Explorer) instead of addEventListener(Chromium based browsers).
- Transpile HTML and CSS which only works in IE.
- Develop an interface to embed the transpiled web files in a desktop application using WPF.
- Participate in scrum meetings such as dailies and sprint plannings.

Tech Stack:

- Desktop development: WPF
- Languages: C#, Typescript, Javascript
- Web development: Javascript, HTML and CSS
- Backend: ASP .Net Core

MAY 2021-
NOV 2021

- Devops: Jenkins, GIT
- Databases: SQL Server

SENIOR SOFTWARE DEVELOPER AT CANVIA

One of my best contributions in this company was to develop a component capable to count every electric element (Posts, Switches, Powerlines) inside a polygon drawn by the user. This was developed using the Angular framework and the Google Maps API.

Responsibilities:

- Develop new requirements to the ERP applications, for example add an interface to show the affected users by electrical blackouts in the last month. This application uses WPF and WCF, so I had to develop a solution to send data from the databases to the front-end application.
- Implement a component to print in the invoices a QR code to pay it by the cell phone.
- Implement a GIS application using Angular to show electrical elements in a map.

Tech Stack:

- Desktop development: WPF
- Languages: C#
- Backend: ASP .Net Core
- Web development: Angular
- Devops: Jenkins, GIT
- Databases: SQL Server

NOV 2020-
APR 2021

TECHNICAL LEADER AT ARJEN S.R.L.

In this position I led a team of 3 developers to make a software in which the powerlines were drawn in Google Maps. This to help the inspector to check every electric element.

This was developed using the React Native framework, Google Maps API, ASP NET Core, SQL Server and hosting the services in the Azure cloud.

Customer: SEAL, Electricity distribution company in Arequipa Peru.

Responsibilities:

- Mentor junior developers and introduce them to the standards we are working.
- Develop the frontend using React Native.
- Develop the backend microservices using ASP.Net.
- Design the architecture and standards for the project.
- Lead SCRUM meetings such as dailies and sprint plannings.

Tech Stack:

- Mobile development: React Native, Next.js
- Cloud of Azure
- Backend: ASP.Net Core.
- Databases: SQL Server
- Devops: GIT
- SCRUM

MAR 2020-
OCT 2020

TECHNICAL LEADER AT MAPPI.PE

In this position I led a team of 4 developers to make a software that locates in Google Maps Food Street business and restaurants. This initiative started because a lot of people lost their jobs due to the pandemic.

Responsibilities:

- Mentor junior developers and introduce them to the standards we are working.
- Develop the frontend using React.js.
- Develop the backend microservices using ASP.Net.
- Design the architecture and standards for the project.
- Lead SCRUM meetings such as dailies and sprint plannings.

Tech Stack:

AUG 2012-
FEB 2020

- Web development: ReactJS, Next.js, DNS configurations
- The cloud of AWS: EC2, Amplify, RDS
- Backend: ASP .Net Core
- Databases: SQL Server
- Devops: GIT
- SCRUM

SOFTWARE DEVELOPER AT P&S ENGINEERS

Here I developed many projects, the more important:

A blackout system: The goal was to draw a one-line diagram which represents the powerlines. In this diagram then user must register the cause of the blackouts. With these registers every semester this software must calculate a monetary compensation to every customer affected with these blackouts.

This was achieved using the following technologies: WPF, WCF and SQL Server

Here a link to a presentation: <https://youtu.be/4d5IXNnC-Ek>

Density maps: The goal of this software was to draw squares in Google Maps, to represent the sectors with higher energy consumption.

This was made with the following technologies: ASP Net, Bootstrap, Javascript and Google Maps API.

Responsibilities:

- Participate in meetings with the clients to get new requirements to build the software.
- Deliver the solutions to the clients.
- Develop frontend and backend using .Net Framework technologies.
- Design the architecture and standards for the projects.
- Design the model of the databases.

Tech Stack:

- Desktop development: WPF
- Web Development: HTML, CSS and Javascript
- Backend: ASP .Net, NodeJS
- Databases: SQL Server
- Devops: GIT
- SCRUM

EDUCATION

2010

BACHELOR IN SOFTWARE ENGINEERING

NATIONAL UNIVERSITY OF SAN AGUSTIN

SKILLS

- .Net Framework: 10 years
- Relational Databases: 10 years
- Non-Relational Databases: 2 years
- AWS: 3 years
- Node.js: 4 years
- RESTful API: 5 years
- Javascript: 5 years
- ReactJS 5 years
- React Native: 5 years
- TypeScript: 5 years
- CSS: 5 years
- HTML: 5 years
- Azure 2 years
